MANDATORIES: All ceiling fans are powered by double ball bearings. All ceiling fans are normally without regulators. Regulators are available separately. The technical performance figures are rated values, based on a voltage range of 220–240 V (230 V rated), 50 Hz, single phase, AC Supply. These are subject to manufacturing tolerances. Due to constant product upgradation, the models shown in the catalogue may undergo changes in features, performance or looks without prior notice. Model colours shown in the catalogue are indicative and may vary from the actual product colours. Also available is a capacitor-controlled stepped regulator on special requirement for speed control of all energy-saving ceiling fans to give power saving on regulated speed as well as to have zero-hum/noiseless operation.
